## Maxi Handling Belt – Waist Size 24" to 45"

*Enhance Safety and Comfort During Patient Transfers*

The **Maxi Belt** is a **soft, padded handling belt** designed to provide safe and comfortable support during patient transfers or assisted walking. Ideal for use in hospitals, care homes, or home care settings, this versatile aid improves safety for both patients and caregivers during mobility assistance.

Crafted with user comfort and carer convenience in mind, the Maxi Belt is available in two options—with or without a non-slip inner lining. The non-slip lining option helps keep the belt securely in place during movement, reducing the risk of the belt riding up during sit-to-stand transfers or when walking with assistance.

The deluxe model features multiple vertical and lateral handholds, giving carers greater control and a more ergonomic, comfortable grip from a variety of angles. These strategically placed handles enhance manoeuvrability and reduce strain during use.
