Skin Closure Steri-Strips 3mm x 75mm – 50 Pack | Quick Wound Closure & Scar Reduction

Steri-Strips provide a simple and effective way to close wounds, helping to reduce scarring and minimize the risk of infection. Ideal for first aid kits, especially in environments like kitchens where cuts from knives are common.

When skin is split open, healing can be slow and the wound is vulnerable to dirt and bacteria, increasing the chance of infection. Prompt wound closure supports faster healing, but stitches may not always be immediately available or necessary. Steri-Strips offer a quick, non-invasive alternative that supports wound healing and reduces the likelihood of scarring.
