GD05 Shield® Latex Powder-Free Disposable Gloves – Medium

The **GD05 Shield® Latex Powder-Free Disposable Gloves** offer a premium solution for users seeking protection, comfort, and durability across various industries including healthcare, food handling, cleaning, and industrial environments. Manufactured from high-quality natural rubber latex, these gloves are chlorinated to significantly reduce protein content, making them more suitable for individuals with sensitive skin.

With a powder-free finish, these gloves minimize the risk of dust and allergen contamination, making them ideal for sterile and cleanroom applications. The textured fingertip surface ensures enhanced grip and tactile sensitivity even in wet or oily conditions, providing confidence and control during delicate or precision tasks.

Engineered for extended wear, the GD05 gloves feature a beaded cuff that enhances donning ease and prevents liquid roll-back, while the flexible, form-fitting latex material reduces hand fatigue over long periods of use. Despite their lightweight design, the gloves maintain a strong AQL 1.5 quality level for barrier protection and durability.

Certified to EN ISO 374-5 for protection against bacteria and fungi, and achieving Type C chemical resistance (EN ISO 374-1), these gloves meet strict PPE Regulation (EU) 2016/425 standards and are safe for food contact under EU Regulation No. 10/2011.
