

# GP Extra

Now contains silver to reduce bacterial growth

## Hygienic

For many years GP Extra has been the hygienic wiping solution for many businesses.

The non woven closed structure does not allow dirt particles to penetrate the surface and are easily rinsed away.

Colour-coded to reduce the risk of cross-contamination.

## Reduces bacterial growth

During production silver is added to the cloth and during use when these silver ions come into direct contact with bacteria and germs, they inhibit their growth.

## Highly efficient and durable

The non woven structure leaves a smear free surface after wiping, removing the requirement for a second wipe to dry the surface.

- High wet and dry strength for a long, hard wearing life.
- Closed structure resists tearing and snagging.
- Machine washable 50 times and auto-clavable for repeated use.
- Large and bulky making it easy to handle and gives optimum surface coverage.

## New modern design

Silver isn't the only improvement to the cloth. The design has also been modernised to fit in with the demands of 24 hour cleaning practices.

## Absorbent

The high fibre density combined with capillary action within the fibres gives the cloth excellent absorbency.

Liquid is sucked up between the fibres instead of just swelling them.

Each cloth can absorb up to 8 times its own weight in water.

TSU	Description	Colour	Packs/Case	Pieces/Pack
115091	GP Extra	Blue	25	6
115093	GP Extra	Red	25	6
115092	GP Extra	Green	25	6
115090	GP Extra	Yellow	25	6
106353	GP Extra	White	25	6
